- Conclusion

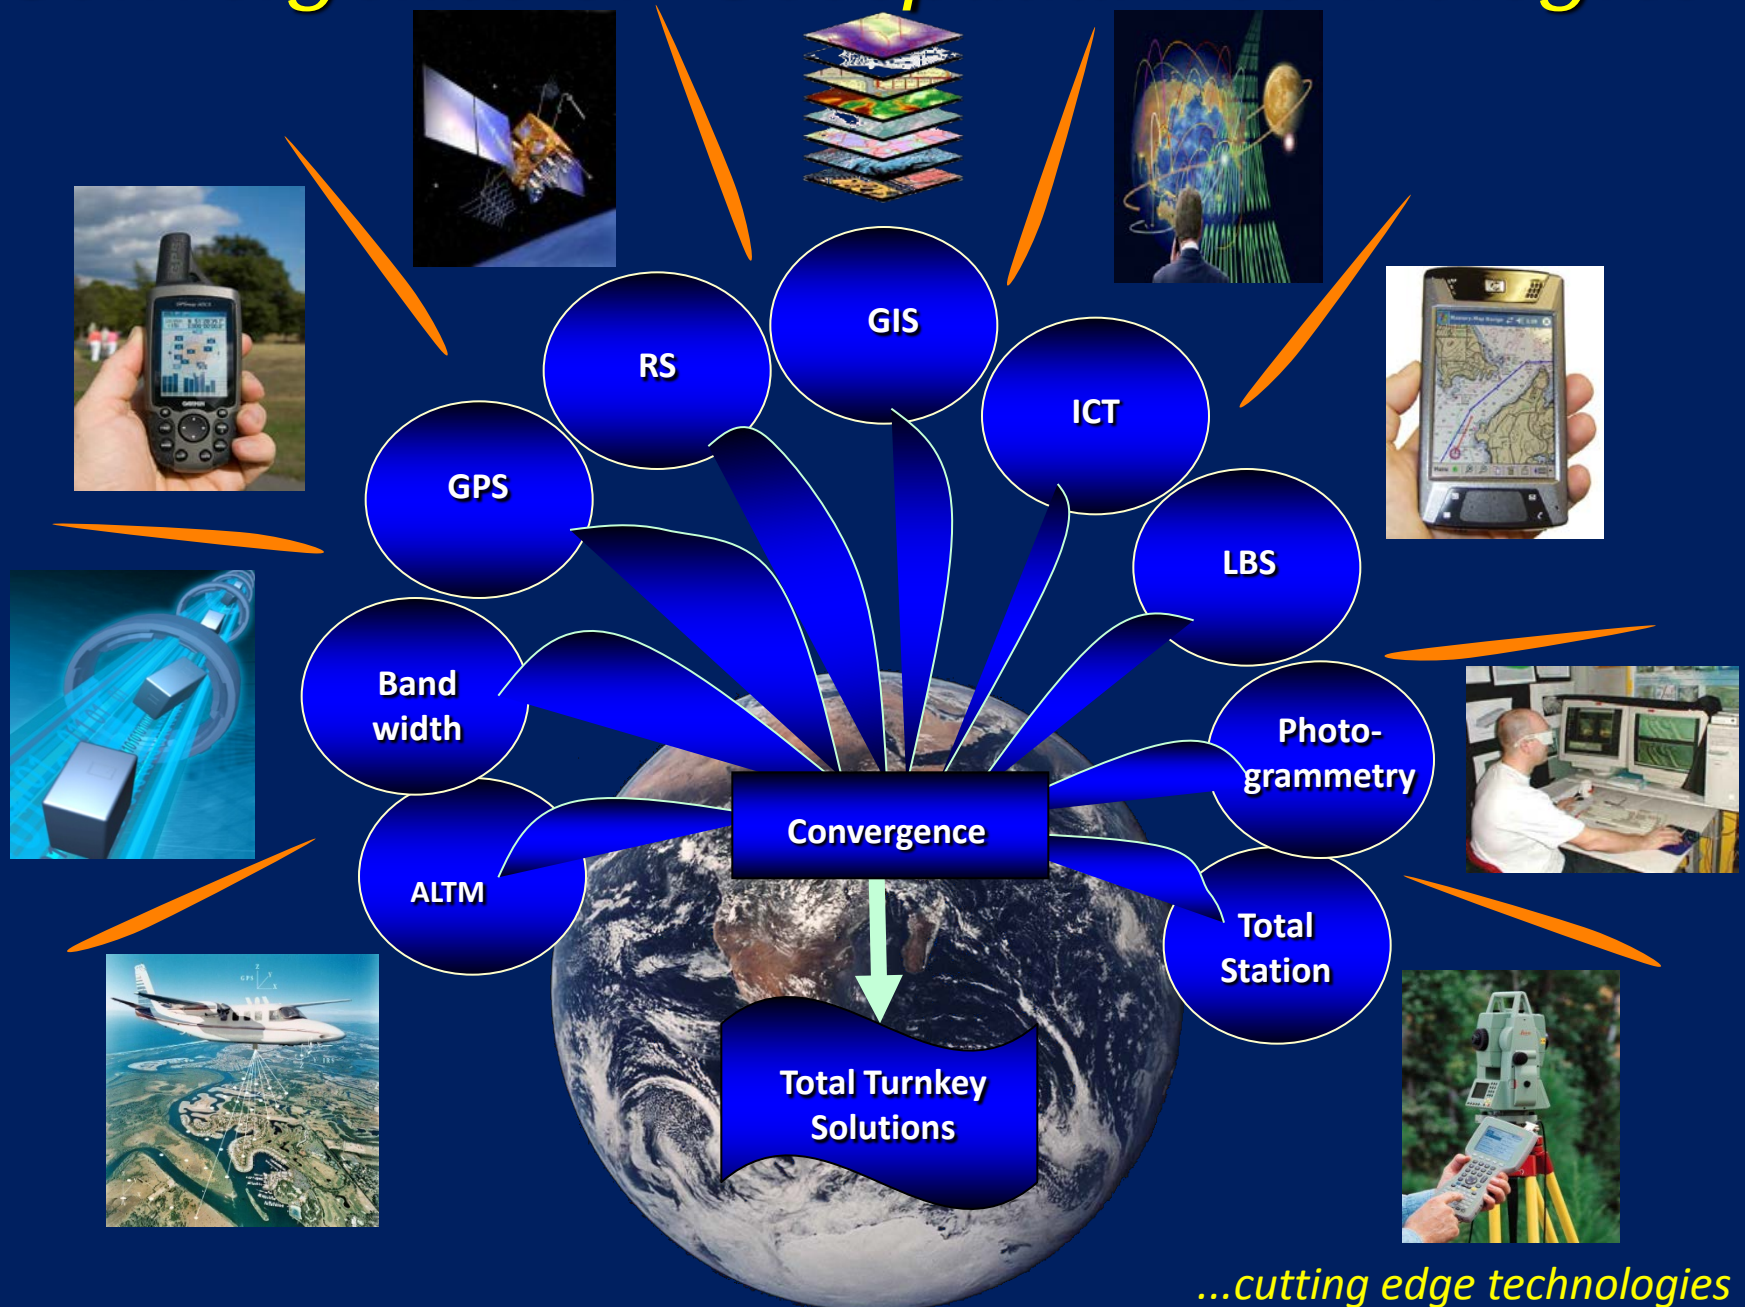

Geospatial Data

- “Geographically referenced data that describe both the location (geometry) and the characteristics of spatial features.”

(Chang, 2009)

Convergence of Geospatial Technologies

...cutting edge technologies

IRS – OCM 360 meters

IRS – WIFS 188 meters

IRS – LISS-I 76 meters

IRS – LISS-II 36 meters

***IMPROVEMENTS IN SPATIAL AND SPECTRAL RESOLUTIONS OF SENSORS
DELHI AND ENVIRONS***

IRS – LISS-III 23 meters

IRS – PAN 5 meters

CARTOSAT 2 < 1 meter

What is GIS.....

“A Geographic Information System is a collection of tools to build, maintain, and use electronic maps and associated databases”

... A tool that makes complex things easier to understand and manage

GIS is the Science of Our Environment ...the new language to describe our environment

Increasingly Being Seen as a Framework for

➤ Understanding

- Patterns
- Relationships
- Processes

➤ Conceptualizing

➤ Modeling

➤ Visualizing

**... Integrating
What We Know**

Spatial data models

- Two fundamental approaches:

–raster model

–vector model

Functionalities of GIS

Data Capture

DAYMEASUREMENTS

Buoy	Date	SST	WS	Humid	Temp10	...

GIS-based Analysis

Questions a GIS can Answer?

- ☆ LOCATION (Question: What is at ...?)
- ☆ CONDITION (Question: Where is it....?)
- ☆ TRENDS (Question: What has changed since....?)
- ☆ PATTERN (Question: What spatial pattern exists..?)
- ☆ MODELING (Question: What if....?)

Geospatial Analysis

Why?

Answer geographic questions

- *Where is the nearest school to my home?*

Make informed decisions

- *Choosing where to locate a new refinery*

Take action, make changes

- *Change an intended hiking route*

Build accurate models

- *Modeling effects of change of LULC on soil erosion*

Methods?

- SIMPLE QUERY
- SPATIAL QUERY
- SINGLE LAYER OPERATION
- MULTIPLE- LAYER OPERATIONS
- SURFACE ANALYSIS
- NETWORK ANALYSIS
- POINT PATTERN ANALYSIS
- SPATIAL MODELING

Visualization

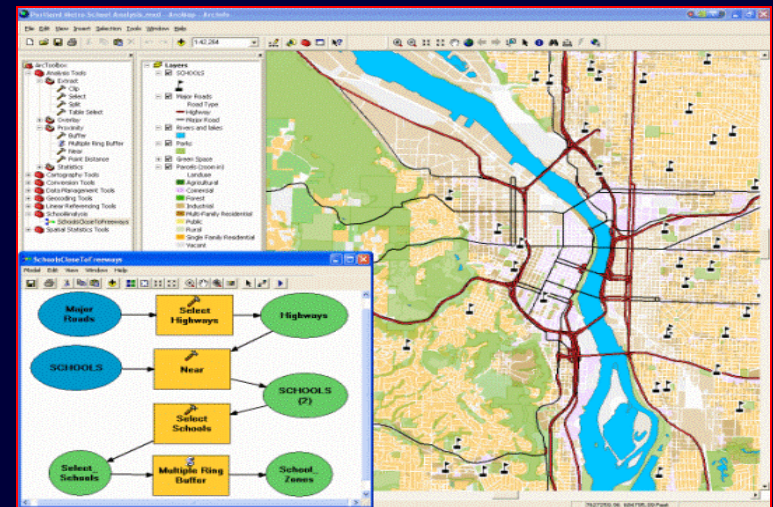

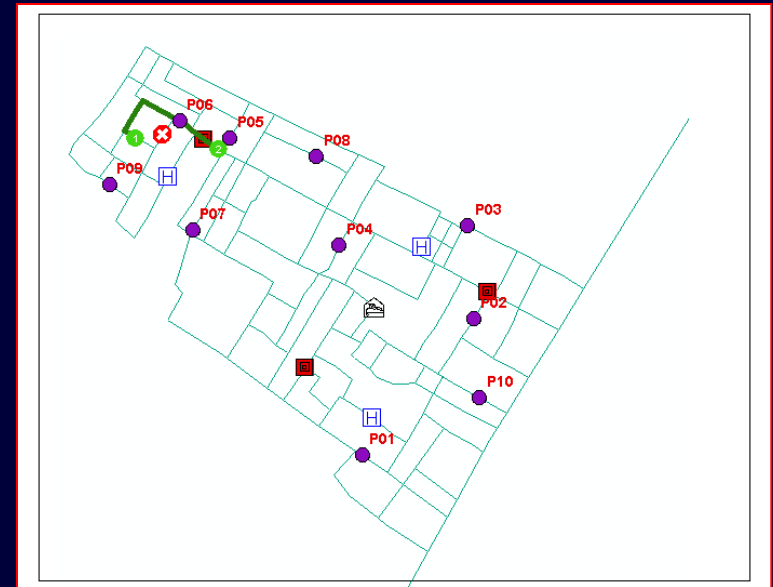

“2009 : - Plugin required, Best viewed on IE 8 and 2014 :- platform & plug-in independent”

GIS Applications in Administration

GIS for Managing Elections

- Effective management and monitoring of polling stations.
- Prioritize the areas for new Polling stations and identification of polling station for additional deployment of forces.
- Overall prepare vulnerability mapping of different polling station ahead of polling

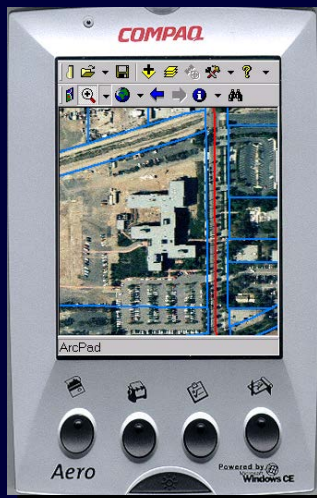

GIS will answer following queries like...

- Where the polling station is?
- What is the location of adjacent facilities?
- What are the places with records of sensitivity, violence or other activities?
- What is the shortest route to polling stations to major roads and amenities?
- Effective number of voters??
- Results of elections??
- Restructuring or redeployment of polling stations, if required.
- Electronic database of persons on elections duty.

Mapping of Polling Stations

- ▶ GPS Device calculates locations in form of Longitude & Latitude (X & Y).
- ▶ GPS Enabled device can have Software for GIS Data generation on field. It means that polling stations and other utilities can be plotted as POINTS on the device, which will take shape of a map in later stage.
- ▶ Roads can be plotted as LINES and other closed proximities like parks, buildings can be mapped as POLYGONS.

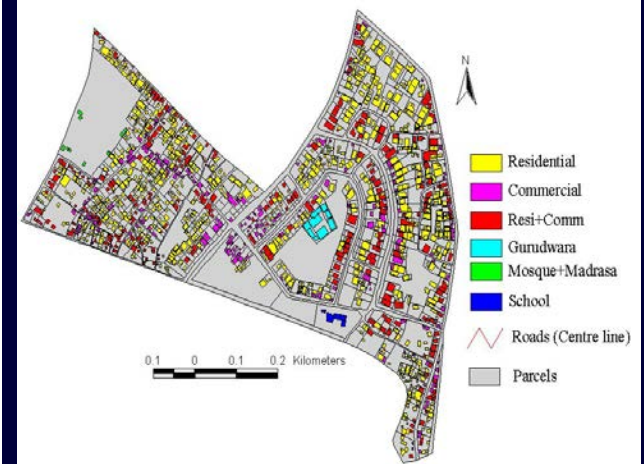

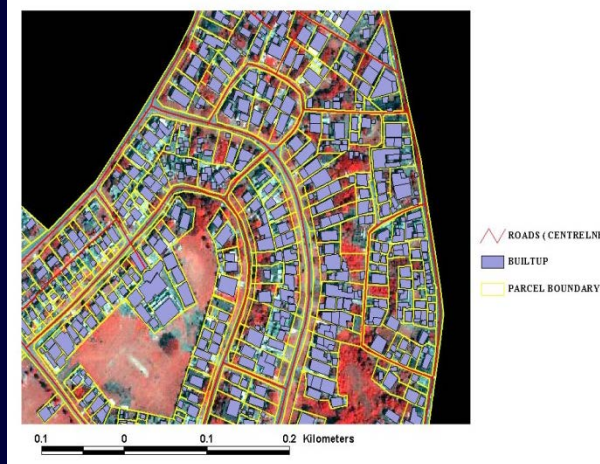

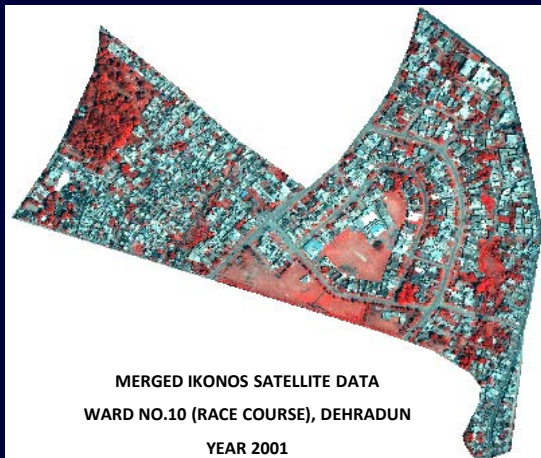

Smart Phones

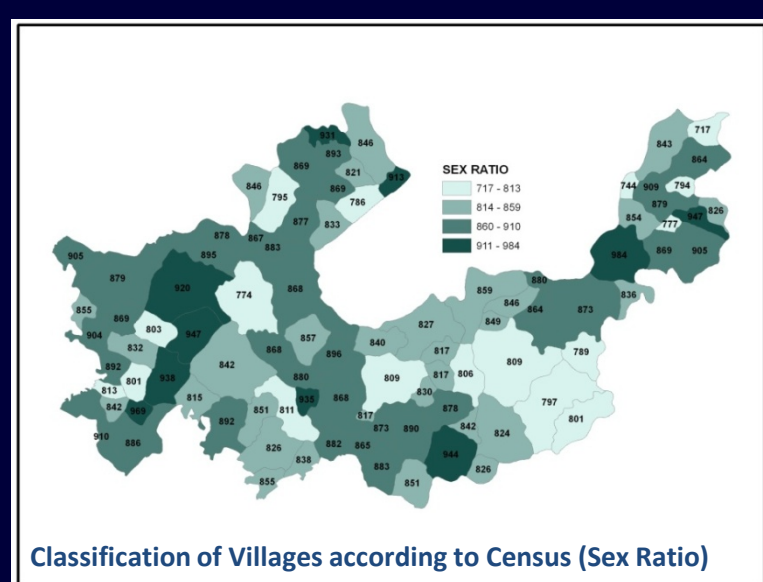

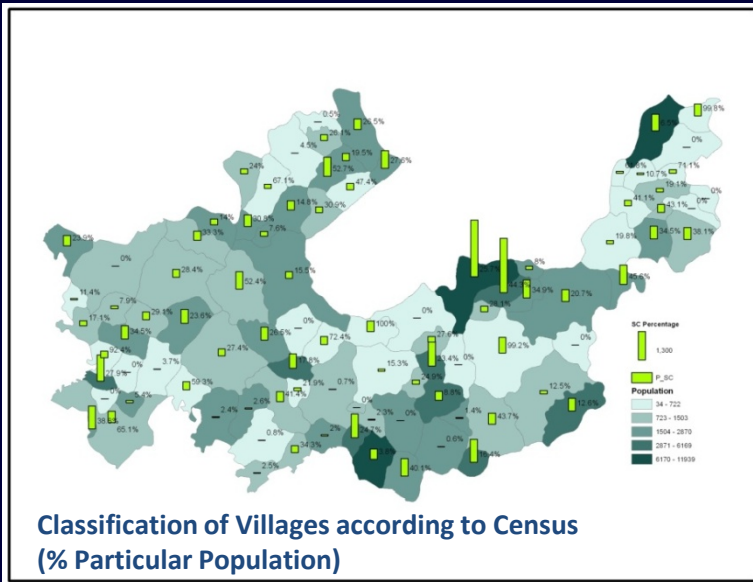

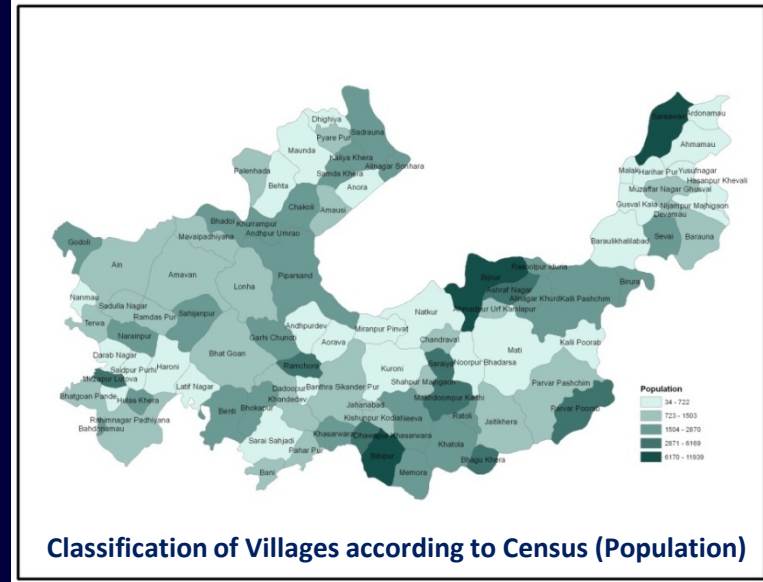

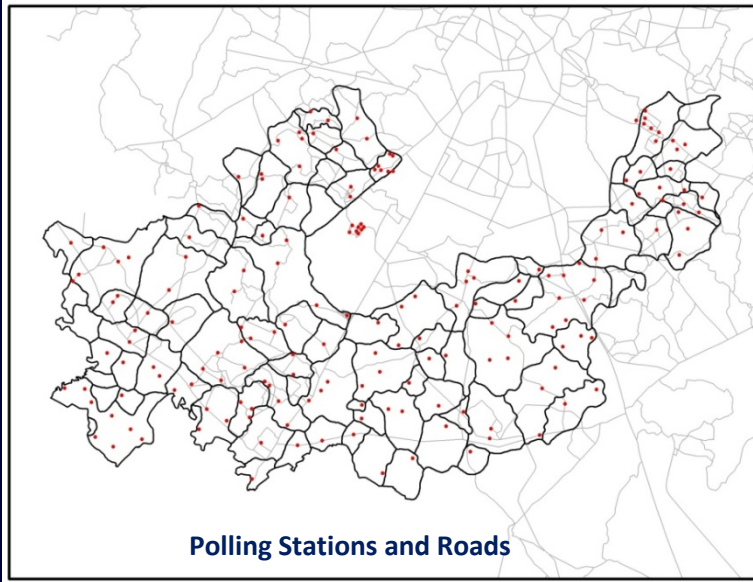

Data can be collected on the real time using GPS & Location Based Devices/Smart Phones.

Collect GIS Data

- Through Field Mapping using GPS
- Through Satellite Images
- Existing Data

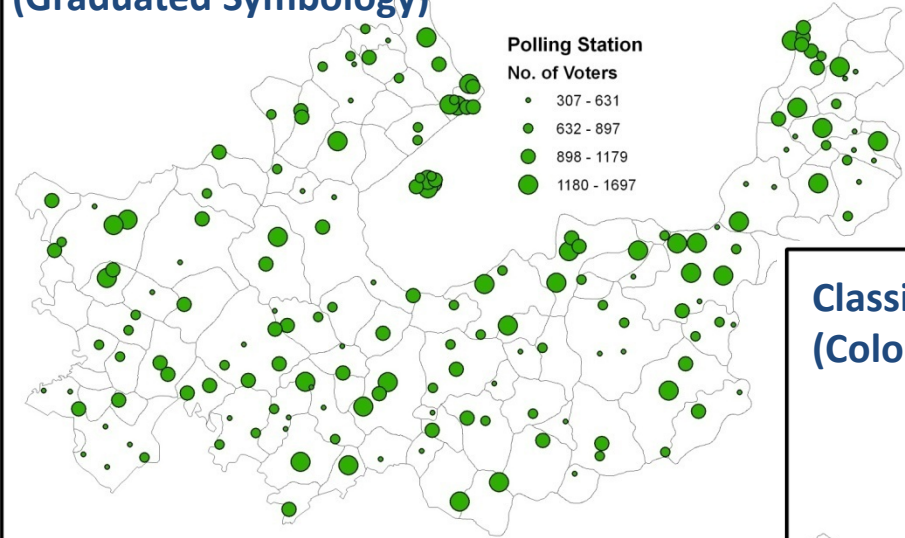

Election Data Representation in GIS

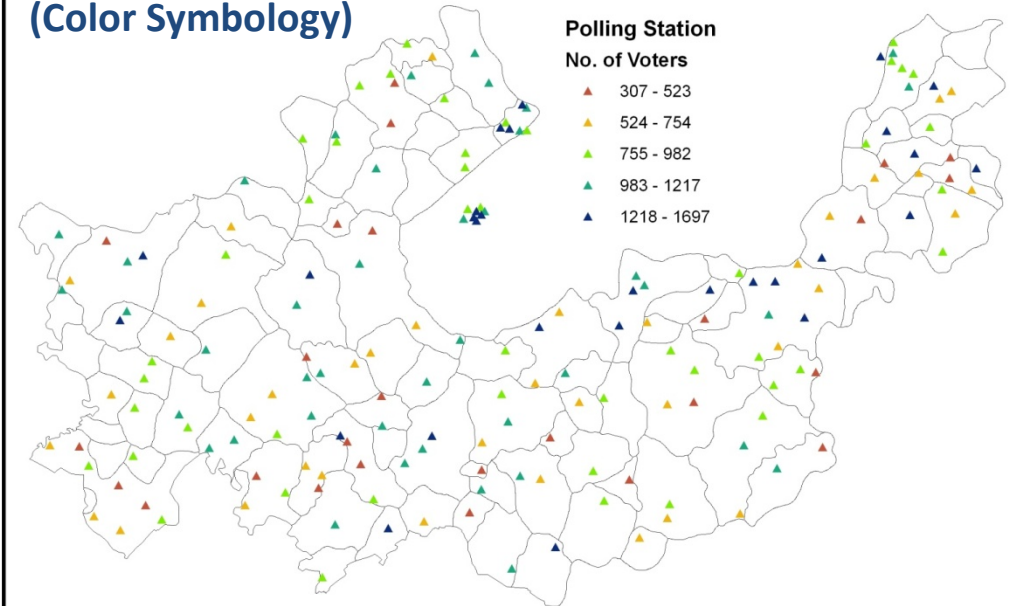

Election Data Representation in GIS

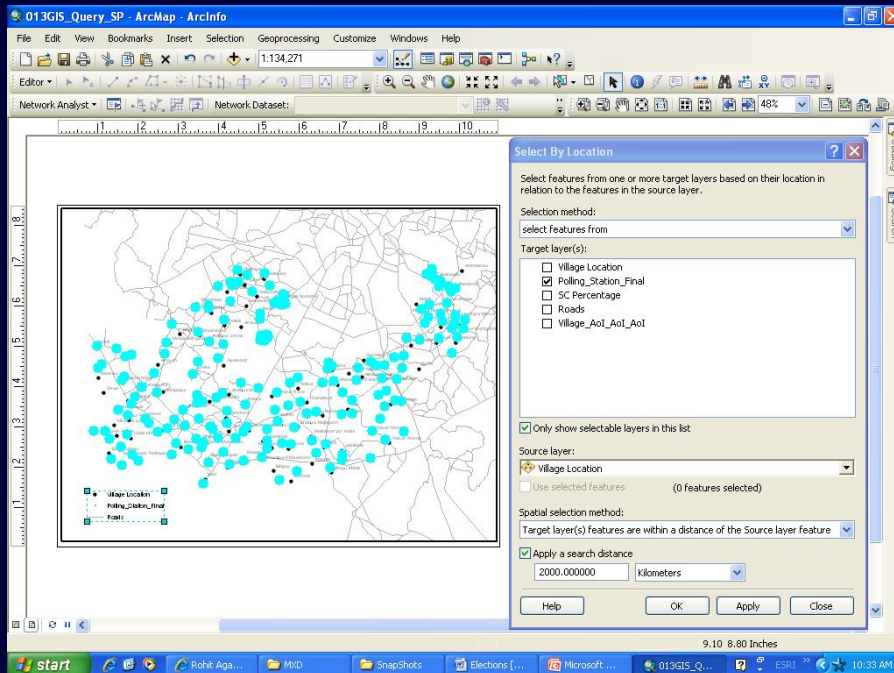

Classification of Polling Stations (Graduated Symbology)

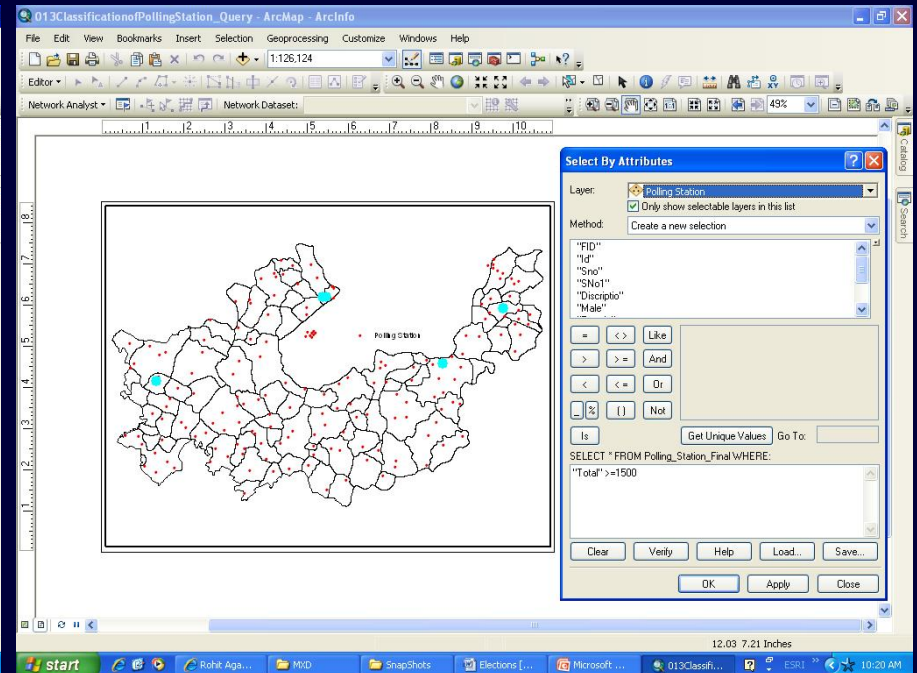

Classification of Polling Stations (Color Symbology)

Election Data Analysis using GIS

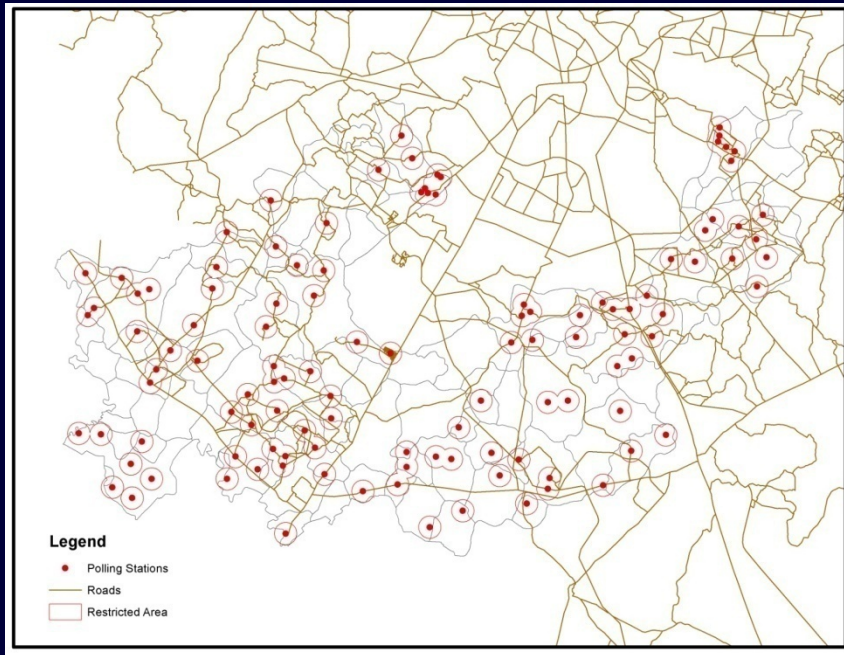

GIS Queries: Spatial
(Polling Stations within 2 km distance of village settlement)

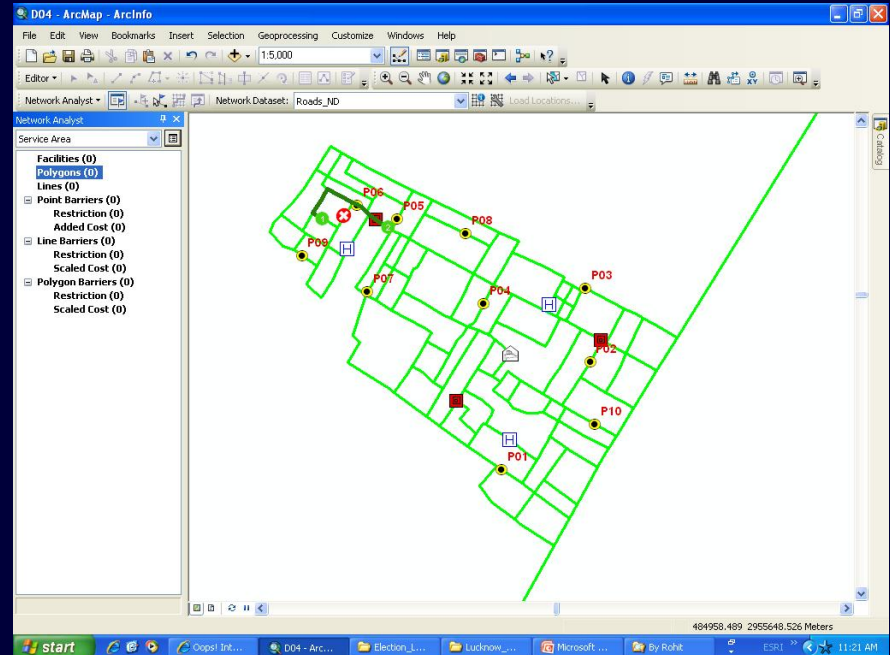

GIS Queries: Non-Spatial
(Polling Stations catering voters ≥ 1500)

Election Data Analysis using GIS

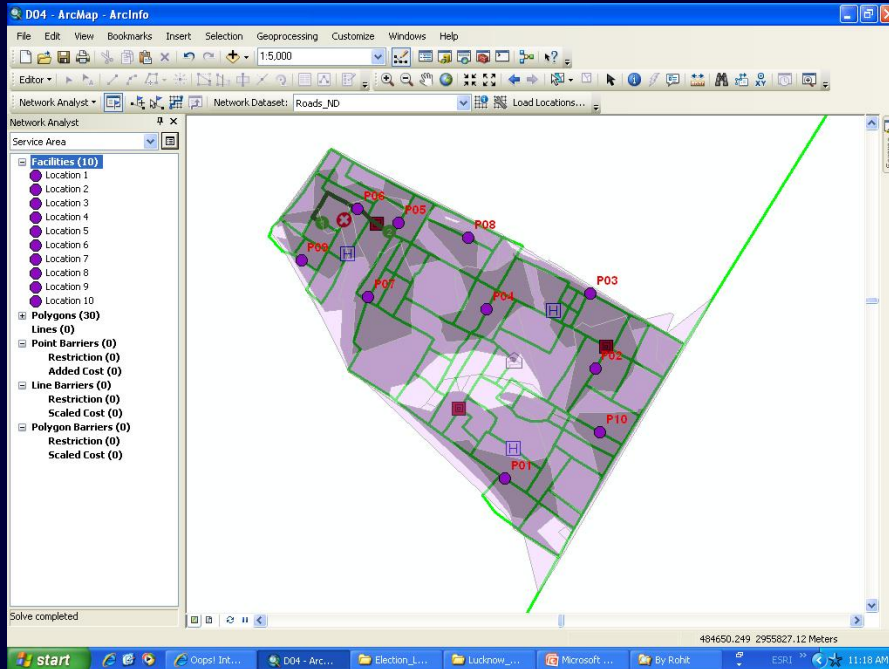

Restrictions: Non Approachable Area
(During Elections)

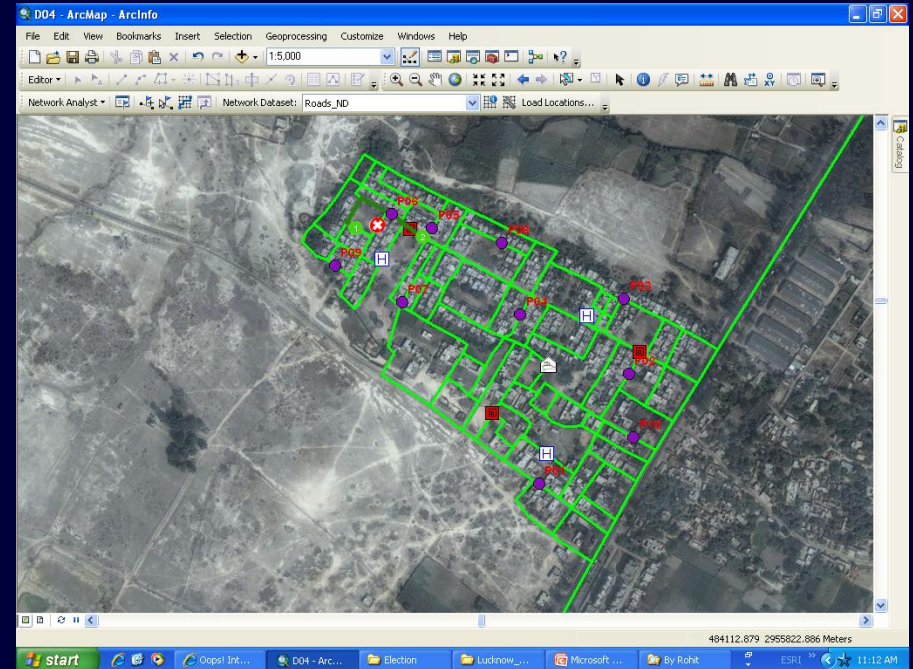

Shortest Route Analysis

Election Data Analysis using GIS

Service Area Mapping

Design GIS: Prepare Interactive Maps

Election Commission AP

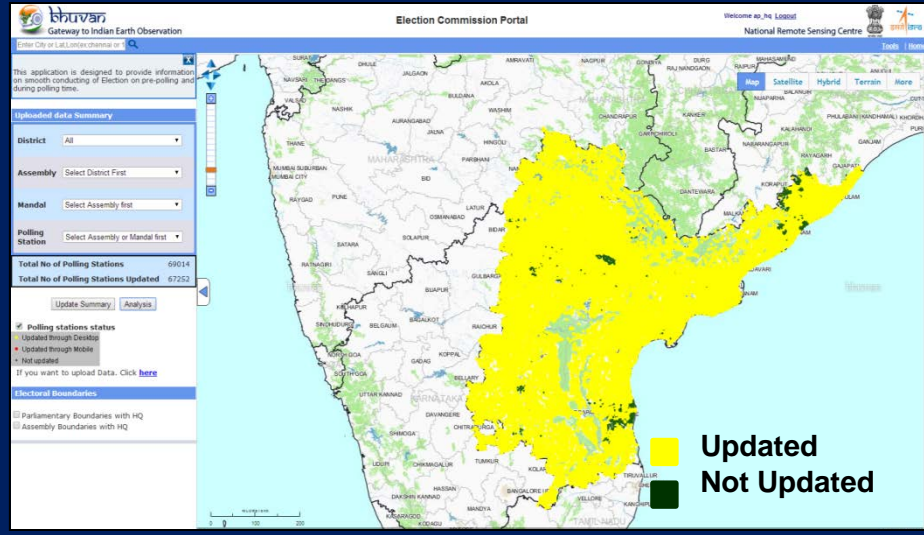

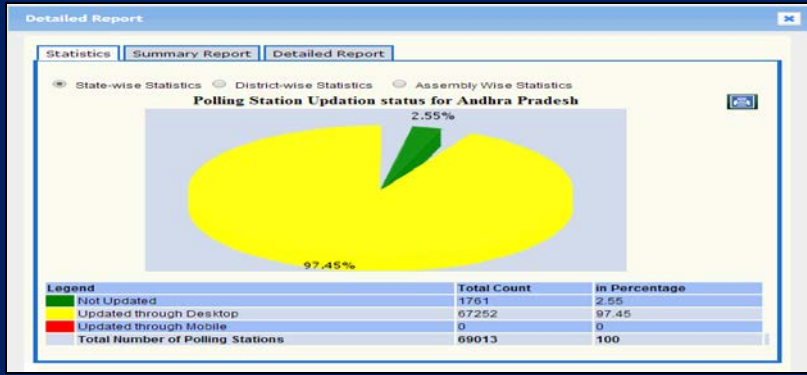

“Role Based Access – HQ, District (23 Nos), Assembly (294 Nos) login”

1. Basic Minimum Features (BMF)

Facility to collect 17 parameters of each Polling station by provisioning of Web Interface/Mobile App towards smooth conducting of Polling

2. Analysis & Reports

- State/District/Assembly wise statistics on updates and Spatial View
- Download as Excel

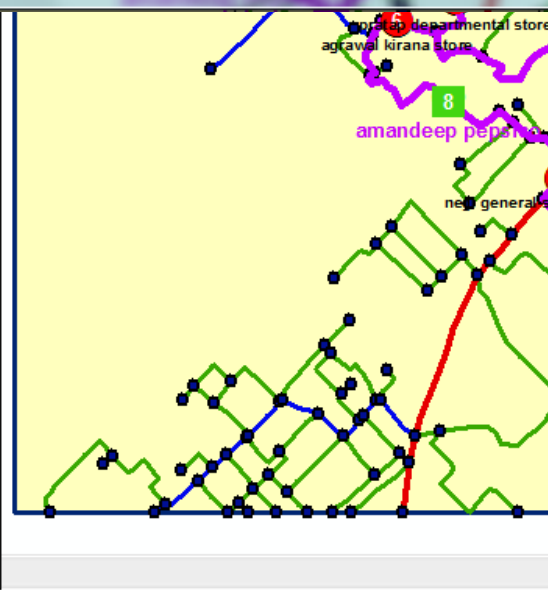

Total No of Polling Stations 69014
Updated Polling Stations 68825

WebGIS Services : Applications on Bhuvan Accelerated Irrigation Benefit Program (AIBP)

Inventory : 103 Projects

- **Bhuvan – AIBP Portal: Facilitates Visualization of Irrigation projects carried under 2 Phases**
 - Phase-I : 53 Projects
 - Phase-II: 50 Projects
 - Phase-III: Ongoing
- **Datasets Available for Visualization:**
 - Canal Networks,
 - Canal Boundaries,
 - Hydraulic Structures

Monitoring the Canal progress on Bhuvan

Phase-III: This module is for the Ongoing projects facilitating CWC officials for the Online monitoring through Satellite data and Digitization Tools available.

- **Salient Features:**
 - Canal Digitization: Facilitates digitization of Canal Networks with Calculation of total Canal Length, No. of gaps, Gaps Segments Length through help of Cartosat data.
 - Add Content option for Remark Notification
 - 3 levels of Access Control
 - Data Editing facility for Field Data.

Satellite based AIBP Project Monitoring

Urban Master Plan Formulation on Bhuvan

Salient features

- Open source freely available GIS software package.
- Use Bhuvan WMS service for data creation.
- Authenticated login system with valid username and password.
- User can create and upload the data.
- Versions of spatial data is maintained in case of Rejected spatial data.
- Alert notifications for users for any new updates.
- Online communication /feedback facility.
- Video Tutorial and user manual for training.
- Helps the user for easy and effective urban planning.

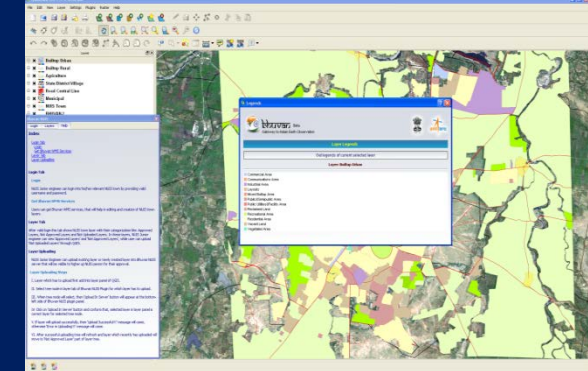

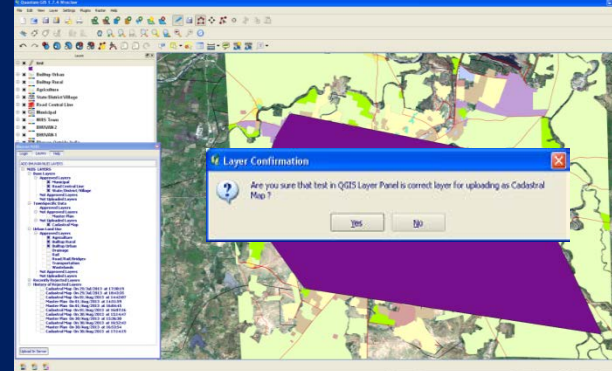

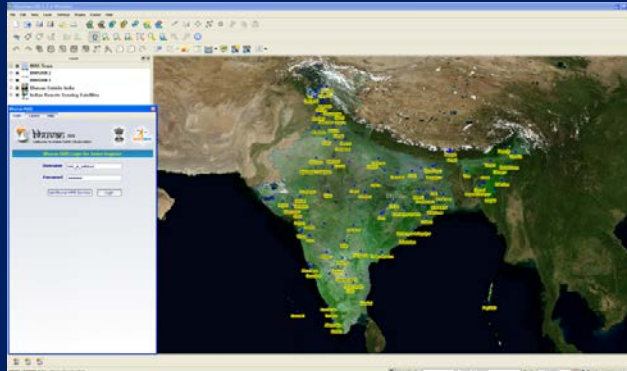

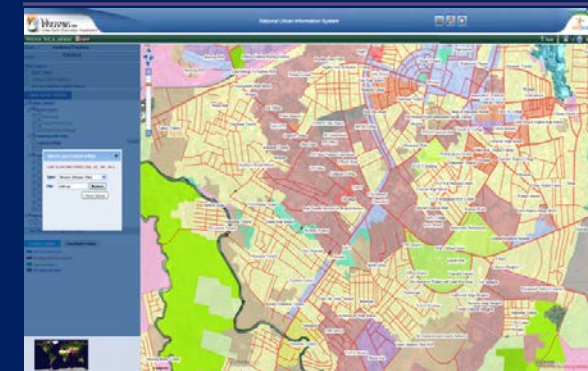

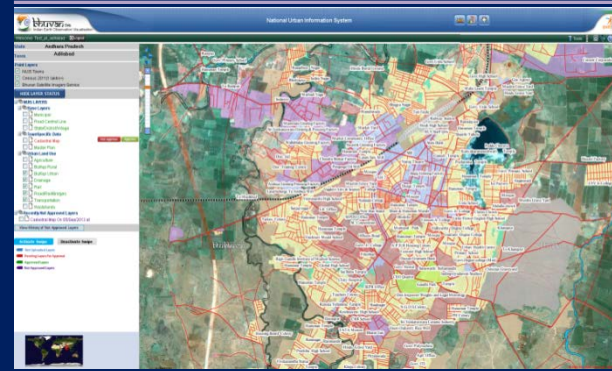

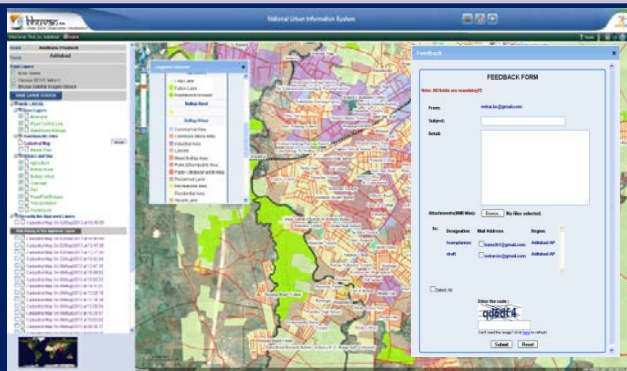

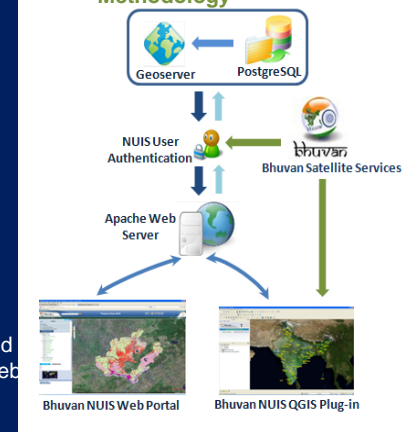

WEB APPLICATION FOR NUIS

- **Citizen View**
 - Overlay of Master Plan and Vector Layers.
 - Time series visualization.
 - Feed back.
- **Town specific View** :Authentication to specific town.
 - Junior Level Officer
 - Upload data(Raster and vector).
 - Second Level officer
 - Approve or Reject the data after visualization.
 - Spatial data versioning.
 - Status Notifications.
 - Higher Level Officer
 - Visualization.
- **State specific view** :Authentication to all of selected state.
- **Nation Specific View**: Authentication to state and town.

Bhuvan NUIS Plug-in in QGIS software

- Gateway for Client to Bhuvan server communication.
- Single point data management.
- Consuming of Bhuvan satellite services for change visualization in single click.
- Data uploading from client end without browser based environment.
- Serving the uploaded data as web map service.
- Hierarchical user management and data versioning at server end.
- Proper logging and data archival .
- Modification of existing data at client end and updation at server end and using Bhuvan web services.
- Help module for Plug-in functionalities.

Methodology

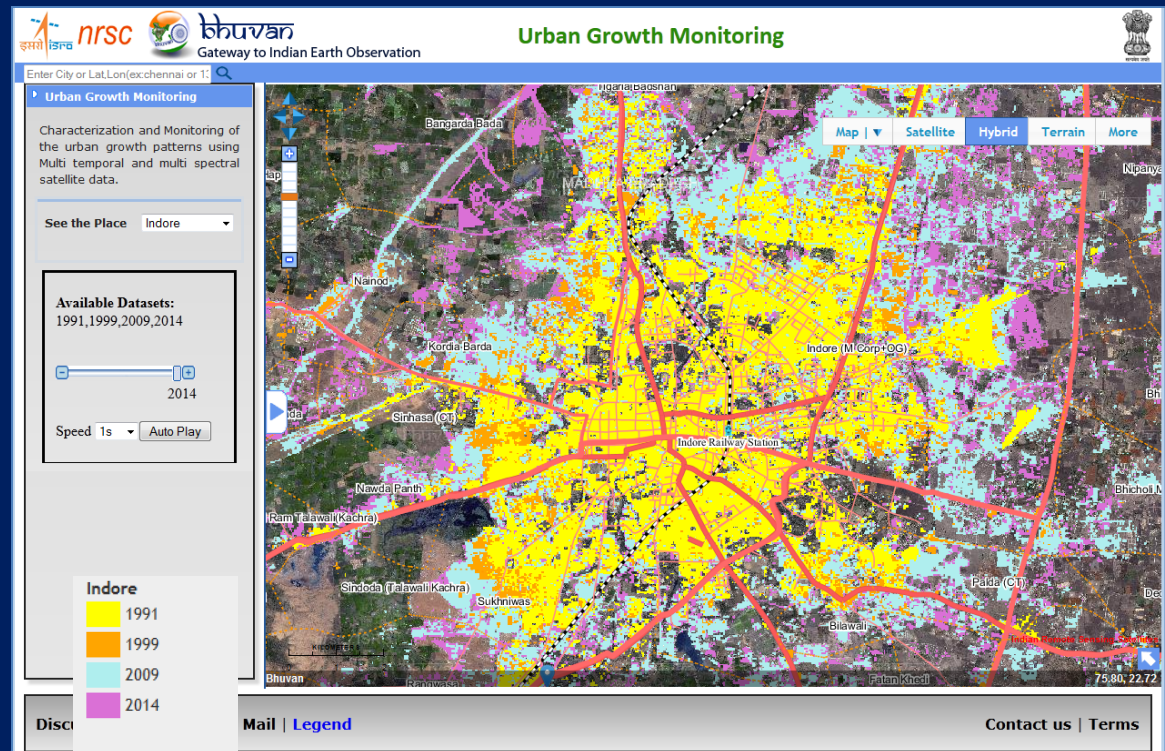

Urban Growth

Characterization and Monitoring of the urban growth patterns using Multi temporal and multi spectral satellite data.

Salient Features

- DB driven framework which can be extended to any number of cities
- Incremental view of urban growth using the single service with dynamic control
- Applying the db driven dynamic color schema to the layer generated
- Animated view for growth monitoring of urban with the speed specified

School Bhuvan

An e-learning portal for the students

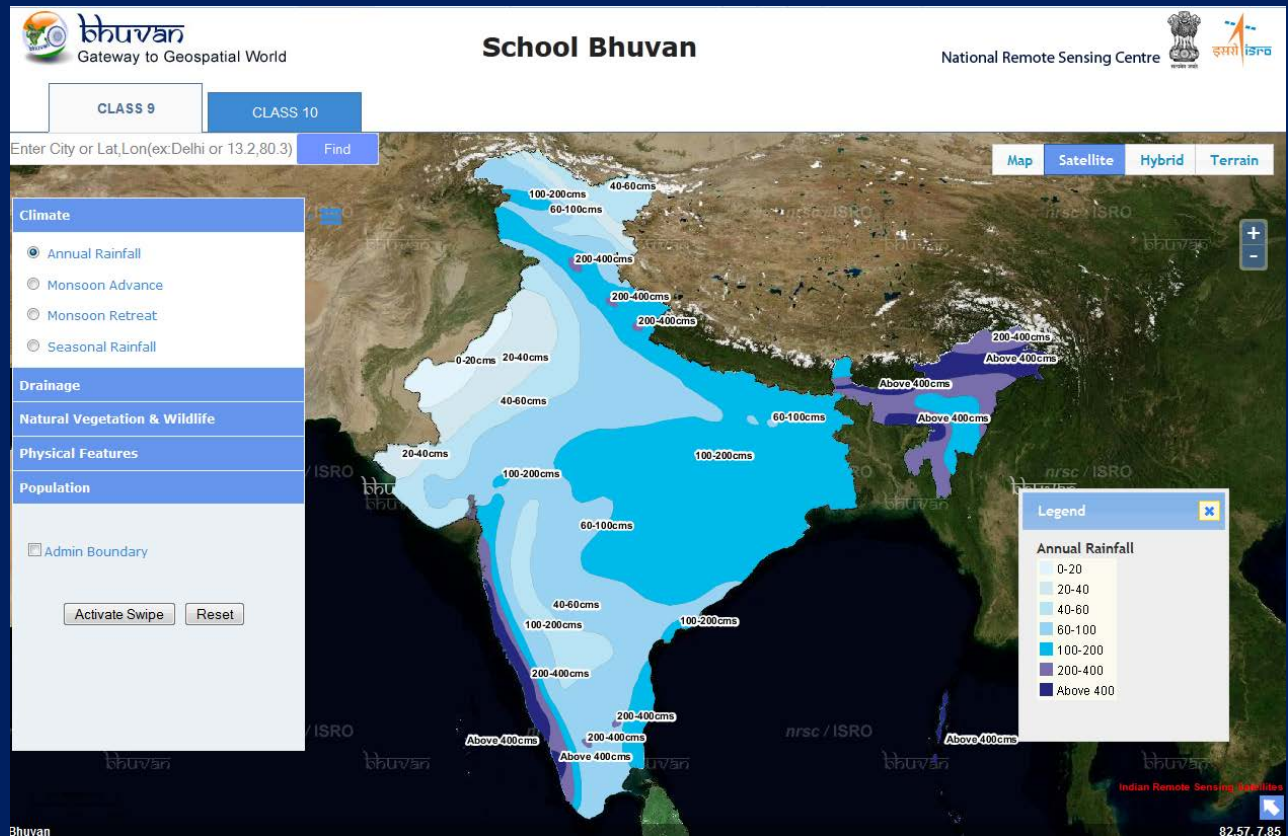

A portal providing map based learning to bring awareness among the students about country's natural resources, environment and their role in sustainable development.

Salient Features

- Visualization of 9th, 10th class maps of various categories (Agriculture, Water, Soil, Mineral etc) based on NCERT syllabus
- Provision to swipe the layers to know the ground reality
- Provision to take print the maps in PDF format

Future Plans

- Online Interactive quiz for both practice and exam
- On click Feature information

<http://bhuvan-noeda.nrsc.gov.in/projects/schoolbhuvan/>

Crowdsourcing/VGI using Mobile Apps on Smart Phones

Crowdsourcing/VGI for Disaster Management - MANU

Crowdsourcing/VGI basically allows the public to create and contribute geospatial facts of the field which specify both spatial and non spatial properties of particular location. This is made feasible with the help of field – based mobile GIS which uses mobile communication networks and the internet as the communication medium for mobile spatial information service framework.

Map the Neighbourhood in Uttarakhand

Risk due to petrol pumps

LOCATION OF PETROL PUMPS WITHIN DEHRADUN MUNICIPAL AREA

200m BUFFER ZONE AROUND PETROL PUMP

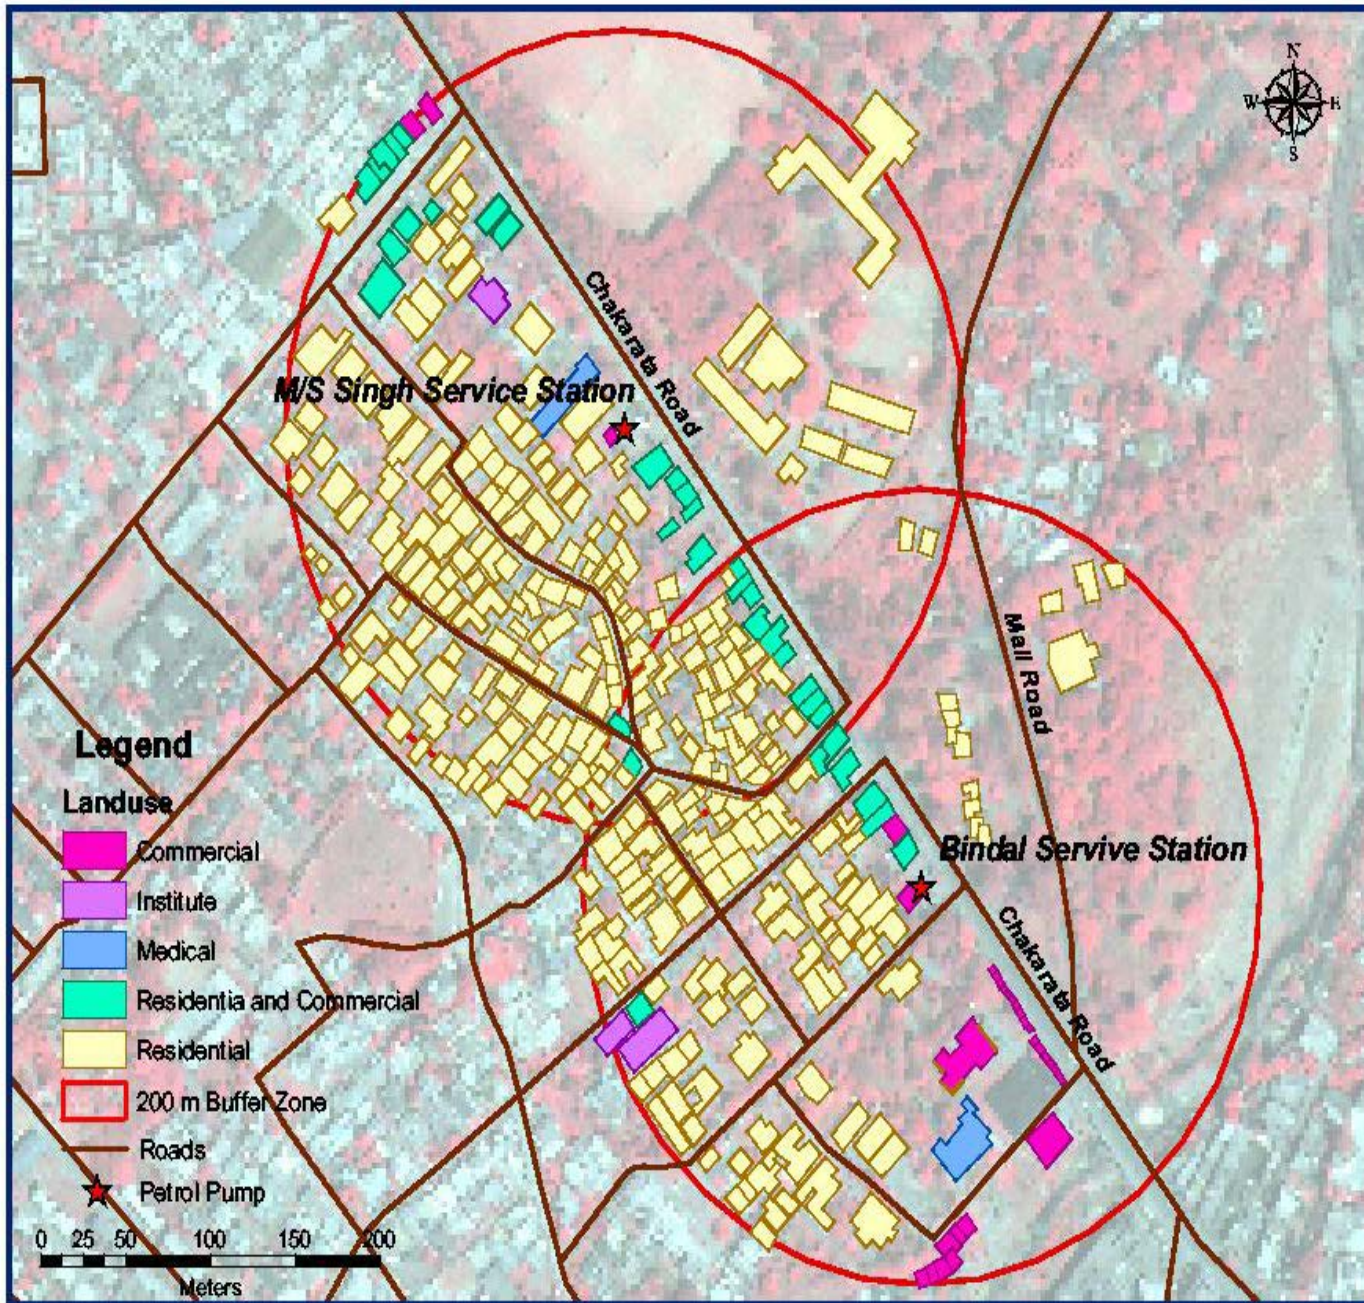

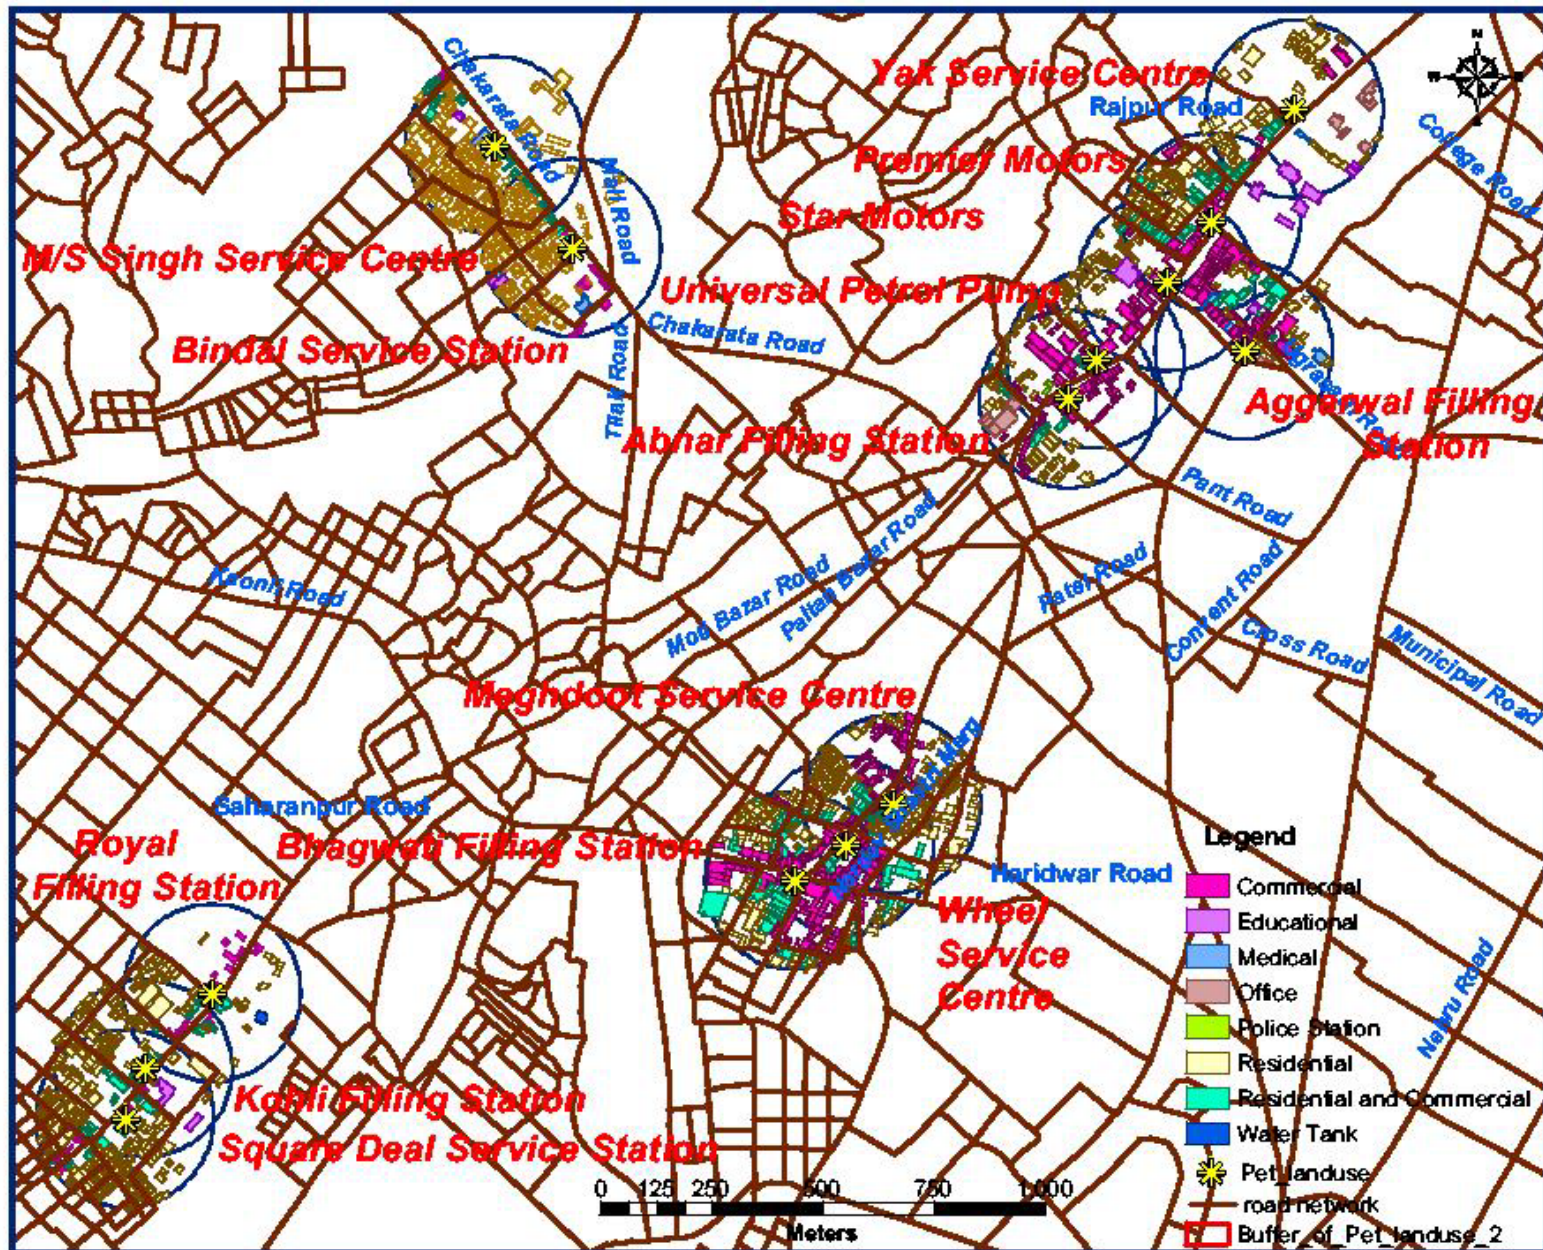

FIG.3: LOCATION OF PETROL PUMPS AND ASSOCIATED BUILDING USE IN 200m BUFFER ZONE

Building Uses Around Different Petrol Stations

1. Yak Service Station

Building Use	No. of Building
Residential + Commercial	14
Commercial	5
Residential	57
Office	5
Police Station	1

2. Premier Motors*

Building Use	No. of Building
Medical	2
Educational	5
Residential	76
Residential + Commercial	45
Commercial	57

3. Star Motors

Building Use	No. of Building
Medical	2
Educational	1
Residential + Commercial	21
Residential	63
Commercial	71

Criteria taken for assessment of Risk

1. Building Density

- a) High (> 15 buildings/hectare)
- b) Moderate (10-14 buildings/hectare)
- c) Low (< 10 buildings/hectare)

2. Population Density

- a) High (> 1500 persons)
- b) Moderate (1000-1500 persons)
- c) Low (< 1000 person)

3. Building Uses

Geo-spatial approach for Development & Planning

Come... Let us create a better future

We need to participate in

Greater understanding for each other
Shared sense of responsibility
More empathy
Cause and will to act
More collaborative efforts
Stronger leadership

... For ourselves and our children

“The Application of GIS is limited only by the
imagination of those who use it”
